

Thank you for your purchase! We hope we enjoy your air plant! Below, we have provided some information to help you care for your air plant!

Species of Air Plant: _____

Preferred Temperature:

50-90 degrees (If in dry environment, you may need to compensate for the improper humidity by longer baths weekly or extra misting in between baths, be sure to read the signs for under/overwatering)

Light:

Air plants prefer bright, indirect sunlight. They thrive under fluorescent lighting as such found in home or office lights. Your air plant can be placed in direct sunlight too; however consider an extra misting in between baths to keep your air plant moist and hydrated. More direct light will help encourage flower and color changes.

Tips:

***Always remove your air plant from the terrarium (especially glass) prior to watering. Let dry before returning to terrarium.**

***Make sure water does not pool at the base of the air plant, allow plant to dry upside down if possible**

***Under watering is easier to recover from overwatering. Start off with less watering and adjust as the plant needs.**

***Never plant in soil**

Water:

There are two methods to water your air plants, misting or bathing. Often times a combo of each is required and will need to be adjusted to your unique environment. Mist your air plant with water every couple of days; 2x a week is optimal though 1x a week is often sufficient, especially with smaller leaved air plant species.

Alternatively, soak your air plant in water for 20-30 minutes once a week. Gently shake off excess water and allow the air plant to dry on a towel. If you use a fertilizer, only fertilize once a month.
